(54) METHOD FOR DISPLAYING DIGITAL DATA BROADCASTING IN DIGITAL
TELEVISION SYSTEM

[ABSTRACT]

Provided is a method for displaying digital data broadcasting using a plurality of displays in a digital television system. A plurality of displays can be connected through a digital set-top box and a home network with respect to various broadcasting screens such as an AV broadcasting screen, a data broadcasting screen, an OSD setting menu screen, and an Internet screen to selectively display and watch the broadcasting screens on each of displays, thereby selecting a screen meeting user's taste and providing improved convenience to the user. In addition, several persons together can watch different broadcasting or the same broadcasting and watch broadcasting without regard to a place.
